PERSONAL PROJECTS

•Efficient Client-Server

Sep - Nov 2022

Server and client communicate using least no. of bits

- Tools & technologies used: Go, HTTP, Docker, Azure
- Client-Server denotes a relationship between cooperating programs in an application, composed of clients initiating requests for services and servers providing that function or service. Basically is a distributed application framework dividing tasks between servers and clients, which either reside in the same system or communicate through a computer network or the Internet.
